

TESTER ENGINEERING SUITE · V1.0.7-2026

Professional Diagnostics, properly engineered.

A professional-grade Windows platform unifying **J2534 ECU diagnostics, bench programming, live datalogging, CAN bus investigation and advanced vehicle configuration** into a single engineering workbench – built for technicians, calibrators and OEM engineering teams who require deeper access than commercial scan tools provide.

CAPABILITIES

A complete diagnostic platform

Scan tool, bench programmer, CAN analyser, binary editor, seed-key utility, live datalogger and true diagnostic intelligence – consolidated into a single, integrated application.

Diagnostics & Connectivity

Full **UDS (ISO 14229-1)** and **OBD-II** Modes 01-0A, VIN readout with ISO 3779 decode, and global fault-code management with freeze-frame, snapshot and extended data records. The bus topographer sweeps the entire 11-bit and 29-bit CAN ID space and renders the live network topology.

HS-CAN · MS-CAN · SW-CAN · K-Line · DoIP · CAN-FD

Live Data & Analysis

Over **1,000 pre-decoded OEM PID definitions** plus a custom PID builder with a full formula and scaling editor. Multi-PID capture at the highest rate the ECU supports, with waveform plotting, cursor-pair measurement, statistical overlay, histograms, session playback and CSV export.

Relative compression · Mode-06 misfire counters

Programming, Flash & Service

Read, erase and write firmware against **hand-validated flash profiles** – Ford Falcon BA / BF / FG / FGII / FG-X, ZF 6HP26 TCM and Bosch ME7 BSL bootmode. FEPS-aware, with pre- and post-flash SHA-256 verification on every operation.

Ford As-Built editor · Routine Runner · PATS programming

Calibration & Memory Tooling

Load a firmware image with an **ASAM MCD-2 MC (.a2l)** or **TunerPro (.xdf)** definition and every named map, curve and scalar becomes an editable, colour-coded table – live heatmap, rotatable 3-D surface, interpolation and side-by-side image compare.

Checksum-gated write-back · EEPROM & cluster bench editor

Security & Seed-Key

Ford CAN-Generic v2003, Ford PATS and **UDS \$27** coverage across Ford, JLR, VW, GM, Honda, Nissan, Mazda, Subaru, Daimler, PSA / Stellantis and Renault – including VAG **SA2** run straight from the bytecode in the vehicle's ODX – plus a Seed-Key Sandbox for live experimentation.

400+ Ford named-key dictionary · Seed-Key Sandbox

Evidence & Reporting

Every meaningful diagnostic function exports a professional multi-page PDF – customer reports, audit trails, **evidence bundles with MANIFEST.json and per-file hashes**, Certificates of Authenticity and ECU Birth Certificates. Drop-in for insurance, warranty and legal use.

Tamper-evident SHA-256 per-VIN history chain

Why workshops buy it

01

One tool, not a drawer full of them

Scan tool, bench programmer, CAN analyser, binary editor, seed-key utility and datalogger in one application. **60+ OEM families are indexed** with automatic generic fallback, and each gets a branded workspace that re-themes the instant a VIN decodes.

02

You own the licence. There is no subscription

Not a subscription. No auto-renewal. No background billing. The Lifetime tier is paid once and includes every future major version. Licences are hardware-fingerprint-bound with no per-feature unlocks – every supported OEM and flash profile is included.

03

Work you can invoice, defend and hand over

Every flash, DTC clear, security access, As-Built edit and PATS sync appends to a **per-VIN SHA-256 hash chain**. A single altered entry is detectable and the verify tool pinpoints exactly where. Stored locally, never uploaded.

04

Hardware freedom, and reach beyond the bay

Built on the **SAE J2534 PassThru standard** – OBDX Pro, Ford VCM2, Mongoose, CarDAQ, Tactrix OpenPort, VXDIAG VCX and Bosch Mastertech. No lock-in. The remote master / slave agent drives a J2534 device anywhere in the world with full feature parity.

LICENSING

No automatic subscriptions

12-Month Licence

ANNUAL · RENEWED AT YOUR DISCRETION

AUD \$800

/ 12 months

- ◆ Full unrestricted access to all functionality on that software version
- ◆ Technical & diagnostic support
- ◆ Updates within the licensed version
- ◆ Hardware-fingerprint-bound activation

Lifetime Licence

ONE-OFF · LIFETIME UPDATES · PRIORITY SUPPORT

AUD \$2,500

one-off – pay once, use forever

- ◆ Full unrestricted access to the software for life
- ◆ Lifetime updates – every future version included
- ◆ Priority technical & diagnostic support
- ◆ USB hardware token for full offline use

Tester Engineering Heavy

HEAVY DUTY & MOBILE PLANT · LIFETIME

AUD \$4,500

one-off – works fully offline

- ◆ Everything in the Suite, plus the heavy-duty stack
- ◆ SAE J1939 – DM1-DM19, SPN-FMI decode
- ◆ RP1210 adapters – Nexiq, DPA, Jaltest, CAT
- ◆ Fully offline – USB token, zero phone-home

Powerful diagnostics. Engineered for you.

Built by a **trade-qualified diesel mechanic**, and unapologetically **pro Right to Repair**. Request a licence, technical evaluation, custom OEM coverage or bespoke flash profile development – **all enquiries are answered by an engineer within one business day**.
